

Yuhao Zhang  
yuhao.zhang25@ic.ac.uk | [github.com/yzhanglp](https://github.com/yzhanglp) | [yzhanglp.com](https://yzhanglp.com)

Research Interests

Machine learning, computer graphics, and 3D vision, with a focus on **representation learning, generative models, and motion modelling**.

Education

|                                                                  |                                |
|------------------------------------------------------------------|--------------------------------|
| Imperial College London                                          | Oct 2025 – Oct 2029 (Expected) |
| PhD in Computer Science                                          |                                |
| Advised by Prof. Gerard Pons-Moll and Prof. Tolga Birdal         |                                |
| Stanford University                                              | Jun 2024 – Sep 2024            |
| Summer Research Internship                                       |                                |
| Advised by Dr. Jiajun Wu and Dr. Shangzhe Wu                     |                                |
| Hong Kong University of Science and Technology (HKUST)           | Sep 2021 – Jun 2025            |
| BSc in Computer Science & Mathematics, <b>First Class Honors</b> |                                |
| National University of Singapore (NUS)                           | Jan 2024 – May 2024            |
| Spring Exchange, Computer Science                                |                                |

Publications

|                                                                                     |               |
|-------------------------------------------------------------------------------------|---------------|
| * Equal contribution; equal-contribution authors are listed alphabetically.         |               |
| <u>SAMoR: Motion Modelling for Articulated Objects of Any Skeleton and Topology</u> | NeurIPS 2026  |
| Yuhao Zhang, Gerard Pons-Moll, Tolga Birdal                                         |               |
| <u>Anymate: A Dataset and Baselines for Learning 3D Object Rigging</u>              | SIGGRAPH 2025 |
| Yufan Deng*, Yuhao Zhang*, Chen Geng, Shangzhe Wu, Jiajun Wu                        |               |
| <u>DragVideo: Interactive Drag-style Video Editing</u>                              | ECCV 2024     |
| Yufan Deng*, Ruida Wang*, Yuhao Zhang*, Chi-Keung Tang, Yu-Wing Tai                 |               |

Selected Coursework

**Mathematics:** Advanced Probability Theory I (A+); Honors Probability (A+); Numerical Analysis (A+); Honors Calculus II (A+); Honors Real Analysis (A); Honors Linear and Abstract Algebra I (A); Multivariable Calculus (A)

**Computer Science:** Machine Learning (A+); Design and Analysis of Algorithms (A+); Honors Discrete Mathematical (A+)

Honors & Awards

|                                                                       |                         |
|-----------------------------------------------------------------------|-------------------------|
| Chern Class Talent Scholarship – Prestigious Award (Highest Tier)     | HKUST Mathematics       |
| UKRI-funded PhD Studentship                                           | Imperial College London |
| First Prize, Chinese High School Mathematics League                   | Provincial Level        |
| First Prize, Chinese High School Physics Olympiad                     | Provincial Level        |
| University’s Scholarship Scheme for Continuing Undergraduate Students | HKUST                   |
| Summer Research Scholarships                                          | HKUST                   |

Academic Service

Reviewer: NeurIPS 2026; TPAMI; TMC

Additional Research Experience

|                                                                                                      |                     |
|------------------------------------------------------------------------------------------------------|---------------------|
| Research Intern, Statistical Machine Learning Lab, HKUST                                             | Feb 2023 – May 2023 |
| Advised by Prof. Tong Zhang; contributed to LLM fine-tuning and large-scale academic-data processing |                     |

Technical Skills

**Programming:** Python, C++, Java

**Machine Learning / Scientific Computing:** PyTorch, NumPy, SciPy, pandas

**Tools:** Linux, Git, LaTeX, Typst, Blender

**Languages:** Mandarin Chinese (Native), English (Fluent)
